PROFESSIONAL SUMMARY

Computer Science undergraduate skilled in full-stack software development, machine learning, and natural language processing (NLP). Experienced in Java, Python, and JavaScript, building and deploying applications with React.js, Node.js, FastAPI, and MongoDB/MySQL — from data structures and algorithms (DSA) to RESTful API development and production deployment.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, SQL

Web & Backend Frameworks: React.js, Node.js, Express.js, FastAPI

Databases: MongoDB, MySQL

Machine Learning & NLP Libraries: NumPy, Pandas, Scikit-learn, Sentence Transformers

Developer Tools: Git, GitHub, Arduino IDE, MATLAB

Core Computer Science Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems (OS), Machine Learning, Natural Language Processing (NLP), RESTful API Development, Software Development Life Cycle (SDLC)

PROJECTS

Semantic Search System

Tech Stack: *Python, FastAPI, Sentence Transformers, NLP, Embeddings, Cosine Similarity*

- Engineered an NLP-based semantic search system using Sentence Transformers and FastAPI, enabling fast, relevance-ranked document retrieval.
- Designed an embedding generation and cosine similarity retrieval pipeline with semantic caching to reduce redundant computation and improve query response time.

Repository: github.com/Grandhisrikar2005/semantic-search-system

OnlineTSS — Ticket Management System

Tech Stack: *Full-Stack Web Development, Responsive UI, Workflow Design*

- Built a full-stack ticket management web application with a responsive UI, supporting end-to-end ticket lifecycle workflows.
- Simulated real-world IT support operations, including ticket creation, status tracking, and resolution flow.

Underground Access Point Detector

Tech Stack: *Arduino, ESP8266, IoT, Embedded Systems, Sensor Integration*

- Designed and deployed an Arduino-based safety monitoring system using MQ4, DHT11, accelerometer, and ESP8266 sensors to detect underground hazards in real time.

DocuMind AI — Document Summarizer

Tech Stack: *Python, Streamlit, NLP, Text Extraction, Application Deployment*

- Developed and deployed an AI-powered document summarization application with document upload, text extraction, and NLP-based summarization.
- Shipped a live, publicly accessible demo, demonstrating full ownership from development through deployment.

Live Demo: grandhisrikar-documentsummarizer.streamlit.app/

Repository: github.com/Grandhisrikar2005/Srikar-DocumentSummarizer

EDUCATION

VIT-AP University — B.Tech in Computer Science and Engineering 2023 – 2027
CGPA: 7.88 / 10

The Velammal International School, Panchetti — Class XII (MPC) 2021 – 2023
Percentage: 79.8%

The Velammal International School, Panchetti — Class X 2020 – 2021
Percentage: 85.4%

CERTIFICATIONS

MERN Full Stack Certification Program | MATLAB Onramp | Java Programming (Great Learning) | Introduction to Artificial Intelligence (Infosys Springboard)

ACHIEVEMENTS

- Completed the IGNITE 3.4 Program by Wadhwani Foundation (36 hours) — entrepreneurial and technical skill-building initiative.
